GnaneshwarMusili 

Professional Summary

Full Stack Developer with nearly 4 years of experience building enterprise-scale web applications using .NET, .NET Core, Angular, and SQL Server. Specializes in containerized healthcare data platforms, ASP.NET Core API design, and end-to-end delivery across complex, data-heavy systems. Consistent track record of driving performance improvements and modernizing codebases in Agile environments.

Work Experience

Developer II – REALPAGE, Hyderabad | June 2026 – Present

- Currently contributing to enterprise-scale property technology solutions.
- Contributing to Agile software development practices, including sprint planning, code reviews, testing, and continuous delivery processes.

Software Engineer I – COTIVITI, Hyderabad | March 2024 – June 2026

- Led the Angular framework migration from version 16 through 17 to 18, ensuring application stability and modernizing the frontend architecture.
- Built custom Agentic AI workflows to automate repetitive development and validation tasks, reducing manual developer effort by 50%.
- Developed a background worker service using .NET to monitor distributed pod execution states in real-time, maintaining data integrity across concurrent workflows.
- Optimized database insertion performance by 70% through bulk insert operations for supporting evidence tables, significantly reducing processing time for large member datasets.
- Configured and maintained CI/CD pipelines using Bamboo for automated build, test, and deployment workflows to containerized environments.
- Reduced production bundle size by replacing the deprecated flex-layout library with clean, native CSS Grid and Flexbox styles.
- Designed and developed RESTful APIs using C# and ASP.NET Core, implementing efficient business logic and data processing workflows.
- Reviewed code and mentored 3 junior developers on Angular best practices, SOLID principles, and clean C# coding standards.

Associate Engineer – COTIVITI, Hyderabad | September 2022 – March 2024

- Developed full stack web application features using Angular, C#, and SQL Server; built reusable Angular components that improved UI responsiveness and reduced duplication across modules.
- Resolved security vulnerabilities identified through Veracode scans, addressing common OWASP issues and hardening the application against known threat vectors.
- Built backend services and APIs using LINQ and Entity Framework, improving data access efficiency across multiple modules.
- Improved API performance using Dynatrace insights and implemented caching strategies to reduce average response times.
- Contributed automation ideas during hackathons that reduced manual compliance checking effort.
- Delivered consistently across Agile sprints — participated in planning, standups, and retrospectives with a strong record of meeting sprint commitments.

Technical Skills

Backend: .NET, .NET Core, ASP.NET Core, C#, RESTful Web APIs, LINQ, Entity Framework

Frontend: Angular (up to v18), TypeScript, HTML5, CSS3, PrimeNG

Database: MS SQL Server, Oracle, Query Optimization, Stored Procedures, Bulk Operations

DevOps & Tools: Docker, OpenShift, Bamboo CI/CD, Git, Agile/Scrum, Dynatrace, Veracode

Healthcare Standards: HL7 FHIR, NCQA Guidelines, Healthcare Data Interoperability

Testing & Quality: NUnit, Jasmine, Karma, Unit Testing, Integration Testing

GenAI & Engineering Automation: Agentic AI Development, Anthropic Claude, GitHub Copilot

Core Concepts: OOP, Data Structures & Algorithms, Software Architecture, Performance Monitoring

Projects

Digital Quality Engine

C#, .NET Core, ASP.NET Core Web API, Docker, OpenShift, SQL Server, Oracle, HL7 FHIR

Containerized healthcare data processing platform that reads claims data, generates HL7 FHIR-compliant patient bundles, and processes quality measures across distributed pods. Built orchestration API for dynamic pod creation and a background watcher service for real-time execution monitoring. Achieved 70% performance improvement in database operations through bulk insert optimization.

Quality Reporter Web Application

C#, .NET Core, Angular, Web API, LINQ, SQL Server, Oracle, PrimeNG

Healthcare compliance solution that monitors and reports on claims data quality, identifying errors and potential fraud. Worked across the full stack — optimized SQL queries, built reusable Angular components, and resolved Veracode security vulnerabilities. Improved API performance using Dynatrace-driven caching strategies.

Quality Engine Desktop Application

C#, .NET, Windows Forms, LINQ, SQL Server, Oracle

Desktop ETL tool that processes raw healthcare claims text files and converts them into structured database tables following NCQA guidelines. Built data extraction and transformation logic for multiple file formats, optimized bulk insert performance, and enhanced the Windows Forms interface for better user control over file processing and job monitoring.

Certifications

- Certified SAFe 6.0 Practitioner
- Java Programming & HTML — Great Learning

EDUCATION

Bachelor of Technology in Computer Science and Engineering

Guru Nanak Institute of Technology, Hyderabad | 2018 – 2022
